

Hand Held Brix Refractometer VBR90A

- Durable
- Fast and easy measurements
- Measures aqueous solutions with low sugar content
- Can achieve high precision

This optical refractometer ("brixmeter") has a scale in the range of 0 - 90 °Bx (% of the sugar content in an aqueous solution - Mas Sacch). The reading resolution is 0.5 %. It is designed for the measurement of cutting or machining emulsions (the content of oil in an aqueous solution) or very low-concentrated sugar solutions.

Brix scale range (min.)	0
Brix scale range (max.)	90
Resolution	0.5%
Accuracy	±0.5
