

Calomel Double Junction Electrode

The glass body is ideal for laboratory use. The glass is resistant to many harsh chemicals and is easily cleaned. The glass body also allows for a fast transfer of heat to the internal reference electrolyte.

The 8212 is a glass body, refillable, double junction, half-cell reference electrode with a BNC connector. This electrode has a double ceramic junction.

Specification:

Junction : Double Junction Reference

Body : Glass Body

Tem. Range : 5-60 °C

Internal Ref. : Hg/Hg₂Cl₂

Dimensions(mm) : 12*165
